DETAILED ACTION

Drawings

1. The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(c). No new matter may be introduced in the required drawing. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

It appears that the drawings in the PCT application were not filed with the national stage entry of this application.

Specification

Content of Specification

- (a) <u>Title of the Invention</u>: See 37 CFR 1.72(a) and MPEP § 606. The title of the invention should be placed at the top of the first page of the specification unless the title is provided in an application data sheet. The title of the invention should be brief but technically accurate and descriptive, preferably from two to seven words may not contain more than 500 characters.
- (b) <u>Cross-References to Related Applications</u>: See 37 CFR 1.78 and MPEP § 201.11.
- (c) <u>Statement Regarding Federally Sponsored Research and Development</u>: See MPEP § 310.
- (d) The Names Of The Parties To A Joint Research Agreement: See 37 CFR 1.71(g).
- (e) <u>Incorporation-By-Reference Of Material Submitted On a Compact Disc:</u>
 The specification is required to include an incorporation-by-reference of

Art Unit: 3721

electronic documents that are to become part of the permanent United States Patent and Trademark Office records in the file of a patent application. See 37 CFR 1.52(e) and MPEP § 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text were permitted as electronic documents on compact discs beginning on September 8, 2000.

Or alternatively, Reference to a "Microfiche Appendix": See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.

- (f) <u>Background of the Invention</u>: See MPEP § 608.01(c). The specification should set forth the Background of the Invention in two parts:
 - (1) Field of the Invention: A statement of the field of art to which the invention pertains. This statement may include a paraphrasing of the applicable U.S. patent classification definitions of the subject matter of the claimed invention. This item may also be titled "Technical Field."
 - (2) Description of the Related Art including information disclosed under 37 CFR 1.97 and 37 CFR 1.98: A description of the related art known to the applicant and including, if applicable, references to specific related art and problems involved in the prior art which are solved by the applicant's invention. This item may also be titled "Background Art."
- g) Brief Summary of the Invention: See MPEP § 608.01(d). A brief summary or general statement of the invention as set forth in 37 CFR 1.73. The summary is separate and distinct from the abstract and is directed toward the invention rather than the disclosure as a whole. The summary may point out the advantages of the invention or how it solves problems previously existent in the prior art (and preferably indicated in the Background of the Invention). In chemical cases it should point out in general terms the utility of the invention. If possible, the nature and gist of the invention or the inventive concept should be set forth. Objects of the invention should be treated briefly and only to the extent that they contribute to an understanding of the invention.
- (h) <u>Brief Description of the Several Views of the Drawing(s)</u>: See MPEP § 608.01(f). A reference to and brief description of the drawing(s) as set forth in 37 CFR 1.74.
- (i) <u>Detailed Description of the Invention</u>: See MPEP § 608.01(g). A description of the preferred embodiment(s) of the invention as required in

Page 4

Application/Control Number: 10/511,920

Art Unit: 3721

37 CFR 1.71. The description should be as short and specific as is necessary to describe the invention adequately and accurately. Where elements or groups of elements, compounds, and processes, which are conventional and generally widely known in the field of the invention described and their exact nature or type is not necessary for an understanding and use of the invention by a person skilled in the art, they should not be described in detail. However, where particularly complicated subject matter is involved or where the elements, compounds, or processes may not be commonly or widely known in the field, the specification should refer to another patent or readily available publication which adequately describes the subject matter.

- (j) Claim or Claims: See 37 CFR 1.75 and MPEP § 608.01(m). The claim or claims must commence on separate sheet or electronic page (37 CFR 1.52(b)(3)). Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation. There may be plural indentations to further segregate subcombinations or related steps. See 37 CFR 1.75 and MPEP § 608.01(i)-(p).
- (k) Abstract of the Disclosure: See MPEP § 608.01(f). A brief narrative of the disclosure as a whole in a single paragraph of 150 words or less commencing on a separate sheet following the claims. In an international application which has entered the national stage (37 CFR 1.491(b)), the applicant need not submit an abstract commencing on a separate sheet if an abstract was published with the international application under PCT Article 21. The abstract that appears on the cover page of the pamphlet published by the International Bureau (IB) of the World Intellectual Property Organization (WIPO) is the abstract that will be used by the USPTO. See MPEP § 1893.03(e).
- (I) <u>Sequence Listing.</u> See 37 CFR 1.821-1.825 and MPEP §§ 2421-2431. The requirement for a sequence listing applies to all sequences disclosed in a given application, whether the sequences are claimed or not. See MPEP § 2421.02.
- 2. The disclosure is objected to because of the following informalities: the specification does not contain the section headings listed above.

Appropriate correction is required.

Art Unit: 3721

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 26-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Higgins (US 4,063,401) in view of Develog (DE 90 01 319).

In regard to claim 26, Higgins discloses the invention as claimed including positioning tension fingers 38, immediately adjacent each of the corners, at an inner position above load 22, gathering the hood 24, into a plurality of vertically stacked folds, and fitting it over the fingers with the open end of the hood facing downwards, spreading the fingers outward away form the load to an outer position, spaced form the load and stretching the hood, moving the fingers downward such that the hood is drawn over the wrapped load (see Figs. 2-4 and C3,l3-65). What Higgins does not disclose is the movement of the fingers to an intermediate position as the film is drawn over the load. However, Develog teaches that it is old and well known in the art of wrapping to provide tension fingers 11 for holding a wrapping hood 25, where the fingers are moved toward an intermediate position located from a fully extended position for the purpose of drawing a hood over a stacked load (see Figs. 4 and 5).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the invention of Higgins with the arm

Application/Control Number: 10/511,920

Art Unit: 3721

movement means as taught by Develog for the purpose of drawing a hood over a stacked load.

In regard to claims 27 and 28, the modified invention of Higgins discloses the invention as claimed as applied to claim 26 above, except for the movement of the fingers in either a continuous or stepwise manner. However, it would have been an obvious matter of design choice to have moved the tension finger in either a continuous or stepwise manner, since applicant has not disclosed that moving the tension finger in either a continuous or stepwise manner solves any stated problem or is for any particular purpose and it appears the invention would do equally well with either of the these two manners of movement.

5. Claim 29 is rejected under 35 U.S.C. 103(a) as being unpatentable over Higgins and Develog in view of Birkenfield (US 6,032,439).

The modified invention of Higgins discloses the invention as claimed as applied to claim 26 above, except for the use of a holding member acting in conjunction with the tension fingers. However, Birkenfield teaches that it is old and well known in the art of wrapping to provide holding members 22, acting with and resting against tension finger 14 and moving downward with the tension finger for the purpose of stretching a film during application (see Figs. 1-8 and C4,L9 – C5,L32).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the modified invention of Higgins with the holding and stretching means as taught by Birkenfield for the purpose of stretching a film during application.

Art Unit: 3721

Allowable Subject Matter

6. Claims 20-25 are allowed.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul Durand whose telephone number is 571-272-4459. The examiner can normally be reached on 0730-1800, Monday - Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi I. Rada can be reached on 571-272-4467. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
